

WildReason Productions

Summary-

Online @ [<http://wildreason.com>]
Email @ [david@wildreason.com]

Wildreason Productions is a small freelance studio run by myself - David Ryder. I do the programming, layout, user interface, graphics, and customer service. I am passionate in what I do and treat every project personally from start to finish. I strive for prompt communication, beautiful - and clean - designs, and rich interactive interfaces where applicable.

Programming

PHP Primary language to develop server applications

MySQL PHP's sidekick enabling dynamically stored content

Javascript jQuery, MooTools, and plain

AJAX Javascript's sidekick allowing us to create rich interfaces that do not move the page

XHTML I design valid, cross-compatible code that looks the same on all browsers and operating systems.

CSS All styling is put into separate files to make future changes as simple as possible. My goal is to create clean, stylish code.

ASP.net Powerful high-level language makes it possible to bring full-featured applications to the web.

Software

Wildreason Productions takes advantage of open source and free software solutions such as **Drupal**, **Wordpress**, **Magento**, **Cubecart** and **Joomla** just to name a few. I am also familiar with a lot of popular API's such as **PayPal**, **AlertPay**, **YouTube**, **Vimeo**, **Brightcove** and much, much more.

About

I have been programming - for both corporations and as a freelancer - for more than fifteen years. Educated at the University of Utah in Computer Science and passionate about programming from childhood - I know how to not only design intuitive websites and applications but also how to optimally create artistic code that is easy to read, edit, and is efficient at its job. I want the design experience to be as enjoyable as possible for all parties involved.
